

Generování automatu:

~>

~>

~>

Zjednodušení 1-2

$a^*b(b^*ab)^*b^*aa$

✓ a tedy máme reg. výraz

$\Rightarrow 1 \xrightarrow{a^*b(b^*ab)^*(b^*+b^*a)} 4 \Rightarrow$

$(a^*b(b^*ab)^*b^*aa)^*a^*b(b^*ab)^*(b^*+b^*a)$

$$\{w \in \{a, b\}^* \mid w \text{ začíná na } \underline{a} \text{ a končí na } \underline{ab}\}$$

$$ba(a+b)^*ab + bab$$

$$\{w \in \{0,1\}^* \mid |w|_0 = 2i, i \in \mathbb{N}\} \rightarrow \text{tedy sudý počet nul}$$

$$(1^*01^*01^*)^*$$

Dostaneme Reg $\rightarrow$ chceme automat

$$(a_1b_1 + c_1)^*$$

- 1) začínají
- 2) navazují po sobě
- 3) pokračují
- 4) λ ?

$\hookrightarrow$ tohle je jednodušší než stavba přes triviální automaty

$$\left((a_1b_1 + c_1)^* (a_2b_2)^+ \right)^*$$

2RA $\rightarrow$ dvacastný koncový automat:

$$\{ \# u \# \mid uu^R \in L(A) \}$$

má 1UA $A = (Q, \Sigma, \delta, q_0, F)$

$\rightarrow$ máme označené pravo, ale nekonečný čas

#	u	#
---	---	---

$\rightarrow$ stále přijímá jen reg. jazyky

DÚ: Sestavte tento automat, pomocí metody ičen sestavte 1-castný.
